DETAILED ACTION

1. Priority Papers filed on 2/21/01 have been received. Information Disclosure Statement filed on 2/21/02 has been received.

Specification

2. The disclosure is objected to because of the following informalities: page 5 line 27 "holding portion 15a" should be holding portion 5a.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1, 4 and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Strobl (U. S. Patent no. 5,360,274).

See figure 1 spherical shaped bearing 1, first member (holding plate) 19, second member (end plate) 7,

5. Claims 1, and 4-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Winkelmann (U. S. Patent no. 3,770,990).

See figures 1-5 spherical shaped bearing 57, first member (holding plate) 48, second member (end plate) 48, cylindrical shaped yoke 12, rotor 14, magnets unnumbered around the rotor,

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 2,3,7 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Strobl in view of Rose (U. S. Patent no. 3,239,287).

Strobl is relied upon as above. Strobl does not disclose the use of an aperture and a projection which is plastically deformed to connect both plates. Rose teaches use of an aperture and a projection which is plastically deformed to connect both plates (see figure 1 and 2 aperture 48 projection 42). It would have been obvious to one of ordinary skill in the art at the time the invention was made to use an aperture and a projection which is plastically deformed to connect both plates as taught by Rose in the bearing setup of Strobl in order to allow for easy connection of the plates rather than relying on welding or adhesive processes which require multiple steps (such as curing with an light source or applying a load).
